Education

Johns Hopkins University

Ph.D. Chemical and Biomolecular Engineering

August 2025 - Present

Baltimore, MD

University of California, Berkeley

B.S. Chemical Engineering, Concentration: Biotechnology

Degree Conferred: May 2023

Berkeley, CA

Research and Work Experience

Johns Hopkins University

Graduate Researcher, Dr. Jeffrey Gray's Lab

October 2025 – Present

Baltimore, MD

- Constructed a massive sampling based protein complex prediction pipeline for use in the CAPRI protein-protein docking prediction competition.
- Developing diffusion methods for biomolecular structure prediction and design

Merck & Co.

ML Researcher – Drug Discovery

August 2023 – August 2025

South San Francisco, CA

- Constructed a denoising method to reduce the noise in drug discovery data, improving deep learning model performance up to 23%.
- Developed a finetuning method improving the predictive performance of chemical pretrained models up to 0.1 Pearson r^2 for ADMET property prediction in both pretrained and non-pretrained baselines.
- Mentored 9 UC Berkeley students to improve on-target potency predictions of graph neural networks using features taken from physics-based docking and ML-based co-folding methods.
- Developed and validated an imputation method to enable a matched molecular pair lead optimization tool to optimize 3+ properties at once.

Thermo Fisher Scientific

Chemical Engineering and Operations Intern

Summer 2021 and 2022

Pleasanton, CA

- Troubleshooted an ultrafiltration unit to remove endotoxin in the downstream oligonucleotide manufacturing process and designed an alternative proposal using chromatography, projecting to save 40+ hours in run time per batch.
- Transferred and optimized 30+ HPLC methods to UHPLC methods using Chromeleon software saving 70%+ in analyte usage, 65%+ in eluent usage, and 55%+ in run time totaling to an estimate of \$45K+ savings per year. Wrote and internally published validation documents and SOPs for the UHPLC instruments to enable accurate and safe usage.

Skills

Software: Python (Pytorch, Pandas, scikit-learn, etc.), Bash, GitHub, PBS/Slurm, Jupyter Notebook, Anaconda, Docking Softwares (Glide, Gold, Vina), MATLAB, ASPEN, COMSOL, Simulink, Agile Document Control, Microsoft Office
Laboratory: (U)HPLC, AKTA Flux TFF, Sartorius BioStat C Plus Bioreactor, Thermocycler, NMR, SDS-PAGE

Certifications

- Deep Learning Specialization (Coursera)
